People look for *solutions*, not technology.

Andrés David Villamizar

Artificial Intelligence Engineer

WHO I AM

I turn manual operations into systems that run on their own

I'm an AI engineer. I put your company's data in one place, train agents that answer and record for you, and build the apps that carry information from the field to the office. Technology is the means: the goal is for your team to stop chasing data.

- AI agents, dashboards and apps connected to each other
- From assessment to a working system and monthly support
- Companies in Venezuela, Colombia and the rest of LatAm

THE PROBLEM I SOLVE

Your company's information lives in chats, notebooks, spreadsheets and old systems

Lost hours

Retyping, reconciling and building reports by hand.

Costly mistakes

One miscopied figure is a lost payment or a wrong payroll.

Blind decisions

Knowing what came in and what went out takes days, not seconds.

Customers waiting

The same questions all day long, and the sale goes cold.

Everything depends on someone

If “the person who knows” isn't there, operations stall.

It's not a lack of effort: the operation simply has nowhere to organize its information.

HOW I SOLVE IT

Three solutions that work together

Admin dashboard

“To know what I made this month I have to build three spreadsheets.”

A dashboard configured to your operation: reports, payroll, income and expenses in one place, connected to your other systems.

Contesta · AI agent

“We answer the same things all day and customers are still waiting.”

An agent trained for the role you need: it serves customers, answers FAQs, trains your team and records data. On WhatsApp, Telegram or web.

Custom apps

“The work happens in the field and the information arrives late or on paper.”

Web or native mobile apps built for your process, feeding the dashboard in real time.

SUCCESS STORY · 1 OF 3

ENLAREDVE

Telecom contractor

01

PROBLEM

Materials and completed jobs were passed by hand between the parent company analysts, the technicians and the in-house analysts.

SOLUTION

An admin dashboard, a native mobile app for technicians to upload information from the field, and an AI agent that records the data.

Result: Technicians report from the field and analysts see it in a single dashboard, with no manual retyping.

SUCCESS STORY · 2 OF 3

Colegio de Contadores Públicos del Estado Táchira

Professional association

02

PROBLEM

The legacy system couldn't update members' dues to the day's BCV exchange rate at the moment of payment.

SOLUTION

An auxiliary system connected to the legacy database that updates dues daily without touching sensitive data.

Result: **Every member pays at the day's rate and the main system stays untouched.**

SUCCESS STORY · 3 OF 3

Chivas Rumba

Tourism · Medellín

See the case →

03

PROBLEM

Income, expenses, agency commissions and bookings: the whole operation was run by hand.

SOLUTION

An admin dashboard for the operation plus a public website showcasing the tours, bookable through a payment gateway.

Result: **Bookings no longer depend 100% on the office team.**

LET'S TALK

Which problem do you want to stop having?

A free 30-minute assessment over video call. I'll tell you what can be automated and what can't, and you decide.
